

B800: Track cleaning car / vacuum cleaner HO scale

Picture shows handsample. final colour scheme not decided yet.

function and concept:

The Dapol cleaning car unifies the functions vacuum-cleaning, polishing and grinding in one vehicle. By changing the inserts the different functions can be chosen. It is also possible to use cleaning liquid while polishing, the liquid can be filled into the tank integrated in the vehicle. The cleaning functions are powered through a motor, a loco is needed to move the car. The car can be used with analogue and digital 12V DC systems

The model is based on the concept and design of the well known Tomix cleaning car for N scale, and is produced by Dapol under license.

the model:

product Number: B800
model for HO scale 2-rail DC model railways, scale 1:87

the model is equipped with: motor (for cleaning function), 8-pin DCC plug, vacuum cleaning insert, three polishing and three grinding insert, tool for changing inserts, foam, NEM coupler pockets, standard HO couplers, switch for functions, multi-language manual.

important notice: Delivery is planned for November 2008. Changes regarding the technical details and the colour scheme are possible.

based on the concept and design of the Tomix cleaning car.
produced with kind permission by Tomytec Co. Ltd., Japan.

Development and production of the model will take place in Wales/Great Britain. Exclusive distribution in continental europe by JapanModelRailways.
